

Avigilon Control CenterTM 7 Software

Video Security, Transformed

Avigilon Control Center (ACC) 7, our latest and most advanced version of ACCTM video management software, is designed to revolutionize how users interact with and gain situational awareness from their video security systems.

Focus of Attention (FoA) Interface

A cutting-edge user interface for live video monitoring that leverages AI and video analytics technologies to determine what information is important and should be presented to security operators.

Facial Recognition

ACC 7 software incorporates AI-powered facial recognition technology to help organizations accelerate response times by identifying people of interest. Through the new “appearance alerts” capability, people of interest are identified based on a secure, controlled watch list created and maintained by authorized users at the organization. Avigilon cameras licensed for facial recognition will seek to identify potential matches based on the watch list and if a match is found, the user is alerted within the ACC software, helping security personnel quickly determine if further action is necessary.

Unusual Motion Detection

Advanced AI technology that continuously learns what typical activity in a scene looks like, and then detects and flags unusual motion to reveal events that may have otherwise been missed.

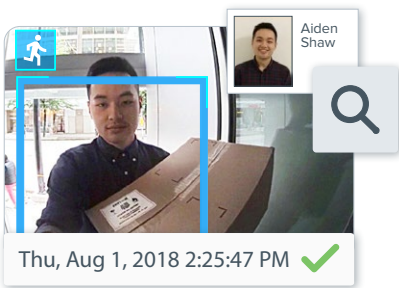

Avigilon Appearance Search Technology

Sophisticated AI-powered video search engine that sorts through hours of video with ease to help quickly locate a specific person or vehicle of interest across an entire site or multiple sites running the same version of ACC software. Search for a person or vehicle of interest by entering a physical description, or by finding an example in recorded video.

Access Control Unification

ACC software works together with the Access Control Manager (ACM) system to receive and act on ACM™ door events, hardware input events and access grants, enabling operators to unlock access doors directly from a camera view.

Identity Verification dynamically displays ACM credentials with ACC camera views.

Identity Search can help find a person of interest using their ACM cardholder information.

Cybersecurity & Privacy Protection

ACC security measures include strong password enforcement, connection authentication and data encryption, as well as strict user permissions to access search functionality that uses personally-identifiable information.

Blurred Export supports compliance with new data protection and privacy requirements of GDPR* by allowing you to export Appearance Search results in ACC software while blurring the background of the camera view to feature only the person of interest in the video.

H4 Video Intercom Support

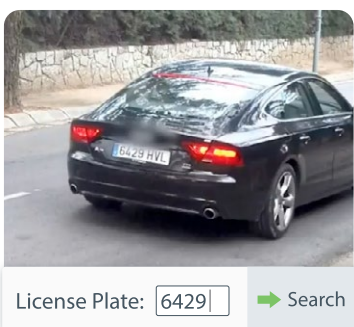

Enables operators to monitor and control access at entry points through two-way audio communication, video verification, and the ability to send a door grant through ACC software.

CREATE A COMPLETE SECURE ENTRY SYSTEM

ACC SOFTWARE

H4 VIDEO INTERCOM

ACM SYSTEM

License Plate Recognition Analytics

Automatically reads license plate information from vehicles, linking it to both live and recorded video. Create and import multiple vehicle license plate watch lists for instant alarm notification when a license plate match is detected, or search and quickly find specific captured license plate video for verification and investigation.
