

HEALTHCARE – SAFETY REIMAGINED

INTEGRATED INTELLIGENCE, SAFER INSTITUTIONS, BETTER HEALTHCARE

YOUR CHALLENGE

Healthcare providers operate in an ever-changing environment, where security threats and acts of workplace violence are a constant reality. Whether it is a disruptive patient or an aggravated visitor, hospitals must prevent incidents from happening and resolve them quickly when they do.

OUR COMMITMENT

Along with our extensive partner community, Motorola Solutions has been serving the Healthcare industry for more than 40 years. We understand the responsibility that healthcare organizations must meet – to their employees, to their patients, and to their families. We honor that commitment and we are dedicated to helping you provide a best-in-class healthcare experience in all of the communities that you serve.

AN END-TO-END SOLUTION

With the industry's largest year-over-year R&D investment and an aggressive strategy of acquisitions and partnerships, Motorola has developed a portfolio of applications, devices, and services that expand the capabilities of first responders and other public safety personnel. This technology offers Healthcare providers an end-to-end security solution that covers more area with better technology – enabling you to detect threats accurately, analyze data quickly, communicate information easily, and respond to incidents decisively.

Detect

A hospital campus or a healthcare clinic is a difficult place to keep safe. Threats can come from any direction; but there's no way for officers and staff to cover every angle. Giving patients and personnel the protection they need requires tools that see what you can't. With high-resolution, remote camera technology from Motorola Solutions and Avigilon, your team can always see what's happening.

- **License plate recognition** – Watch for known threats before they enter.
- **Contact tracing** – Trace contacts with exposed patients, visitors, and personnel to quickly and effectively mitigate risk and curb the spread of infection.
- **Face cover detection** – Proactive, real-time monitoring for face mask use. Advanced, video-based detection technology can detect objects, classify them as human, and scan for protective face coverings. Policy violations trigger automated alerts.

Analyze

With so many people in one place, it can be hard for security officers and medical personnel to know what's really a threat. Organizations need a way to sort through the data and find the information that points to a developing incident. Motorola's self-teaching AI applications help you to scan data from video sources – and find threats before threats have a chance to develop.

- **Focus of Attention and Motion Detection capabilities** – Scan large and remote areas for suspicious activity.
- **Appearance and Identity Search** – Compare images against databases and watch lists for increased awareness.

Communicate

A well-protected campus requires a well-directed team of professionals, who work together to keep patients and visitors safe – but team members don't always have access to the same information. High-capacity data transmission over handheld devices let you get the big picture to everyone, on demand and in near-real time.

- **Multimedia Alert Capability** – Transmit photos and video from cameras anywhere in the institution to all officers and staff as needed.
- **Access to real time incident information** Keep personnel connected as incidents unfold, to ensure an agile response.

Respond

Some incidents can't be prevented, but getting caught flat-footed makes incidents worse. Public safety officers and other staff members need an incident response solution that notifies emergency agencies immediately, and ensures real-time dissemination of incident details to on-campus personnel.

- **Dispatch applications connected to Law Enforcement** – Provide immediate situational awareness for first responders with live video streams to local law enforcement during an escalated incident.
- **Cloud-based interoperability with external systems** – Enables real-time exchange of voice, data, video, messaging, location, and enhanced intelligence, for better information as events unfold.

INTEGRATED INTELLIGENCE, SAFER INSTITUTIONS, BETTER HEALTHCARE

Motorola Solutions is committed to helping you provide the best healthcare available, while meeting critical security requirements and improving the lives of the staff, visitors and patients in your care. We invite you to find out more about our comprehensive communications solution for the healthcare industry. Let us build you a robust communications plan that supports both emergency and everyday communications – keeping everyone who depends on you safer, healthier, and more secure.
